WEATHER KEY POINTS

09/03/21 - 09/09/21

Friday-Thursday

- Generally lighter winds are currently expected through the end of the week, but locally breezy winds will combine with increasingly warm temperatures and very low humidity at times to produce continued elevated fire weather concerns over the mountains and foothills through the holiday weekend.
 - Sundowner winds of 25 to 40 mph are also expected through Tuesday for portions of southern California.
- A warming trend is expected statewide through early next week, with readings well into the 90s up to 105 degrees across the Central Valley and lower elevations of northern California, while the deserts of southern California see daytime highs of 105 to 115.
 - Moderate to locally high heat impacts are likely from Saturday through Tuesday
- Mainly dry weather will persist through Monday statewide, with a gradual increase in monsoon showers and thunderstorms across southern and potentially central California by the middle or end of next week
 - The exact timing of possible rainfall as well as the coverage of any rain remains very low confidence at this time
 - Some dry thunderstorms could also develop over northern California Tuesday and/or Wednesday. Should these storms develop, fire weather concerns would quickly increase.
- Areas of thick wildfire smoke will be prevalent across northern California through at least Saturday night. Some areas will continue to experience very poor air quality and reduced visibility
